Summary

Application developer with 15+ years of experience designing, developing, integrating, deploying, and supporting production applications. Experienced in Ruby on Rails, REST APIs, relational databases, enterprise data integrations, authentication and authorization, Docker, Linux, and CI/CD. Background includes full-stack Rails development with a recent focus on backend APIs and integrations supporting modern frontend and mobile applications.

Technical Skills

Programming & Web

Ruby, Ruby on Rails, SQL, PHP, HTML, CSS, JavaScript, Hotwire

APIs & Integrations

Docker, Docker Compose, Ubuntu Linux, GitLab CI/CD, Git, SSH

Development Tools

GitLab, GitHub, VS Code, JetBrains IDEs, Postman

Mobile / Cross-Platform

Hotwire Native, iOS, Android

Web Accessibility

NVDA screen reader, WebAIM accessibility testing resources, keyboard navigation testing

Experience

University of Wisconsin-Madison – College of Agricultural & Life Sciences (CALS)

Web Application Developer | 2011 - Present

- Design, develop, deploy, and maintain production Ruby on Rails applications and REST APIs supporting college business processes.
- Gather requirements with stakeholders and collaborate on application architecture, workflow design, and relational database design.
- Develop Rails APIs consumed by Vue.js frontend applications as part of a collaborative frontend/backend development model.
- Design and maintain MySQL databases and integrate applications with Oracle data sources and institutional APIs.

- Implement application authentication and authorization using institutional SSO, OpenID Connect, OAuth 2.0/PKCE, JWT validation, and policy-based authorization.
- Develop and maintain Docker-based application environments and CI/CD pipelines for testing, security scanning, image publishing, and deployment.
- Administer and maintain Ubuntu application servers, including upgrades, application deployment, troubleshooting, and production support.
- Develop a Rails-powered cross-platform application using Hotwire Native with iOS and Android clients.
- Collaborate with frontend developers, data teams, infrastructure staff, and business stakeholders throughout the application lifecycle.
- Test public-facing web applications for accessibility using NVDA, WebAIM resources, keyboard-only navigation, and remediate identified accessibility issues.

Education

Madison Area Technical College

Associate Degree, Programmer/Analyst

GPA 3.75
